

«Industrial valorization of strategic value chains for nano-enabled products»

WHAT

VALUE4NANO focuses on a specific set of **market-driven value chains (VCs)** aimed at particular applications, bringing forward a clear plan for their **implementation** in order to develop successfully and socially **sustainable products**.

Nano and micro printing for industrial manufacturing

Nano-enabled, depollutant and self-cleaning surfaces

Manufacturing of powders made of functional alloys, ceramics and intermetallics

Lightweight multifunctional materials and composites for transportation

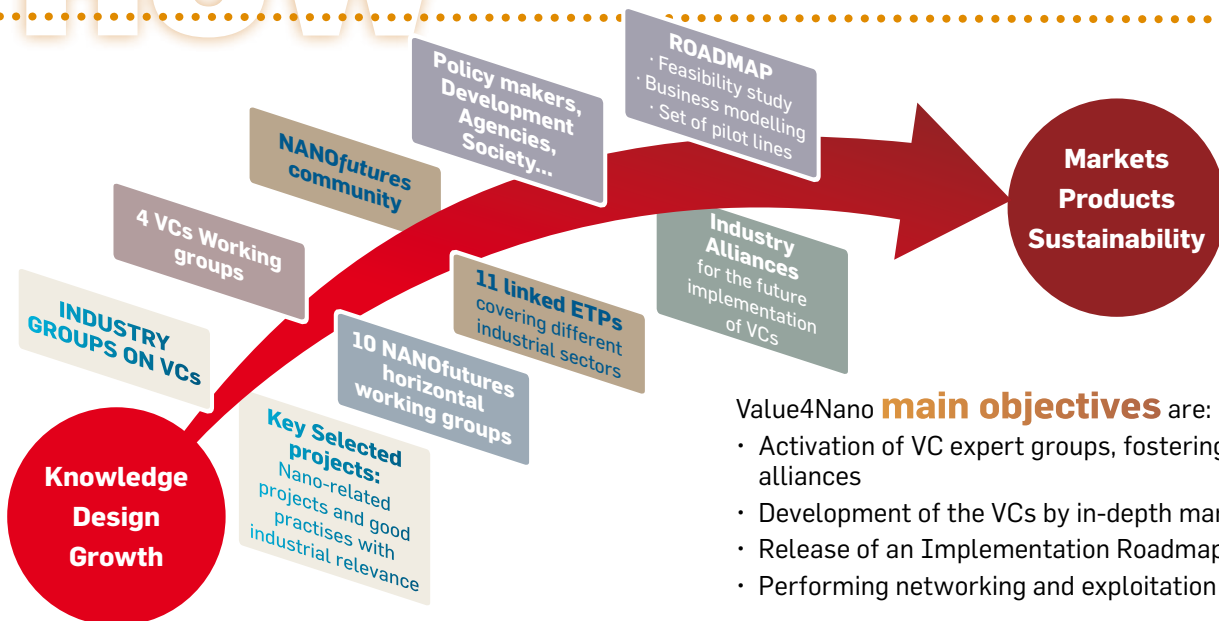

WHY

It is vital to implement nano-promising related research activities into key marketable products:

- That can contribute to address **Societal Challenges** of our time
- Which may boost **European Industrial Leadership** and contribute to the development of a knowledge-based economy
- Where nanotechnology can offer a **clear benefit** and **added value**
- Where critical mass is vital for success and where breakthroughs require **cross-border solutions**

HOW

Value4Nano **main objectives** are:

- Activation of VC expert groups, fostering industry alliances
- Development of the VCs by in-depth market analysis
- Release of an Implementation Roadmap
- Performing networking and exploitation activities

The core of the activity is performed through the interaction between 4 VCs groups and the 10 Horizontal Working Groups active within **NANO futures** community.
